The conference provides the opportunity for representatives from education and industry to share new perspectives on design education and how these may meet current and future needs.

This year's theme will be addressed via the following conference topics related to engineering and product design education:

- Innovation & creativity in design & engineering education
- Industrial involvement in design & engineering education
- Addressing ethical & social issues in design education
- Assessment methods
- Engaging the public
- Industry 4.0 & the implications for design & engineering education
- Research in design & engineering education practice
- Meeting 21st century challenges in further & higher education
- Educating designers and engineers for a sustainable future in design & engineering education
